Instruction on How to Use **Private Messenger**

1. First of all, since this is a chatting program, we need to run the program twice. To run a program twice, we need to use command prompt.

2. Click on File. Make sure the explorer in the Private Messenger folder.

3. Hover mouse on Open command prompt,then choose **Open command prompt as administrator**

4. On the command prompt, type **python login.py &**, then press enter.

5. Then the program will login. Repeat **step 1-4** to run program twice. Make sure you separate the program on the window to make it easier to use.
6. Insert the username of first app as **1.**
7. Insert the username of second app as **2.**
8. Don't worry about the password. **Leave as it is**, since it will not processed.
9. Click **Login** on both of the program.

10. The main menu will appear for both of the program. Then, click **Start Chatting** on both of the program to begin chat

11. Type your text in both of the box, and click **>** button. The messages will NOT DIRECTLY APPEAR, you need to CLOSE CHATTING WINDOW to make it refreshed.

12. Reopen the **Chatting Window** by click **Start Chatting** on both of the program.
13. The messages will appear. You can do it over and over again.

Thank You.
